I have a 3 year old HP OfficeJet T45 which worked flawlessly with WIN 98SE. I changed to Win XP Pro and am having issues with some of the line drawing on forms in my accounting program. Printer Drivers are latest. Accounting software patches are latest. Accounting newsgroup indicates conflict with some Microsoft security patches. Is there any way to tell if a patch addresses a printing issue. I have always worked on the if it ain't broke don't fix it theory so I rarely apply patches but this time its broke.

Any suggestions will be appreciated.

TIA

George
