If you can't find your way back to a newsgroup, why do you think you have the skill to configure your computer.

All the limited users on my computer can connect to the Internet. I don't want them installing programs or making any changes to the computer, that's why they are LIMITED.

| Hi, can't answer your question, but I have a similar one.....more basic. I want the additional users to be able to get on the internet just as I can on my administrator account. The additional user accounts are currently limited so that they can't install or delete any programs. That's the only limit. Why can't they log on and get on the internet? Willyou please reply to my email if you know because I just stumbled onto this group and probably will not be able to find it again!

| Hope you know
