I would look in Event Viewer for a clue . . .

>-----*Original Message*-----

>*My computer keeps restarting without any warning. After it loads back up it displays an error report saying ' your computer has recovered from a serious error '. The Microsoft online crash site says that the error was caused by a device driver (I assume that means the printer, broadband modem etc.) but when I checked all of these are upto date. Can anyone help?*

>*Thanks*
