Hi,

I have two PCs that are running in different OS ie 98 and another in XP.

Need to know the steps to partition the hard disks operating in both systems without using any third party software please. Am prepared to lose all data as I would like to reformat the systems as well. Also, how do I allocate the sizes of the drives e.g. 40 GB for C: and another 40 GB for D:

Thanks for the advice and help.
