I just reformatted my computer (again) with XP Pro. I also installed Norton System Works and Firewall 2005. It is running fine for the most part but I have found 2 exceptions. When I went to <http://chi.speakeasy.net/> to check my speed all I get is the little white box with the red "x" in it. I found the something happened when I went to a Java (I assume) newspaper crossword puzzle. Is there a setting I need to adjust?

Thanks
