Spyware? If Ramesh' suggestion doesn't fix it, download and run at least one of the following Spyware clean-up programs; the first three and Pest Patrol are free (One may ask for a donation—your choice.):

adaware

<http://www.javasoftusa.com/software/adaware/>

spybot <http://www.safer-networking.org/index.php?page=download>

cwshredder <http://www.safer-networking.org/index.php?page=download>

spyware blaster <http://www.webattack.com/dlnow/rdir.dll?id=105693>

hijackthis

<http://computercops.biz/article-5199-nested-0-0.html>

Bazooka Adware and Spyware Scanner

<http://download.com.com/3000-2144-10247783.html>

Pest Patrol Free Pest Scanner

<http://www.pestscan.com/ScanOrTrial.asp>

>From Frank Saunders, MVP:

"CAUTION!!!! Before you try to remove spyware using any of these programs, download a copy of LSPFIX from any of the following sites:

<http://www.cexx.org/lspfix.htm>

<http://www.spychecker.com/program/winsockxpfix.html>

(if your OS is Win2k or XP) The process of removing certain malware may kill your internet connection. If this should occur, this program, LSPFIX, will enable you to regain your connection."

For some other useful removal tools

<http://www.spywareinfo.com/~merijn/downloads.html>

Also do a full virus scan.

What one doesn't get, the others should.
