Why were you unable to get the rest of the error message? Did the computer reboot? If it did then open Control Panel – System – Advanced and click on the Settings button in the Startup and Recovery (bottom) section. In the Startup and Recovery window click on the checkbox for "Automatically restart" to clear it then click on Apply and OK as needed to exit.

For more information about your specific error message see MVP Jim Eshelman's web page for STOP errors at <http://www.aumha.org/win5/kbestop.htm>

In particular you might find the Windows XP Resource Kit section, linked from Jim's web page, useful in helping to diagnose the underlying cause of the problem.

Good luck
