Hi, all of a sudden when I double click on folders such as "My Pictures", instead of the folder opening in the same window, a "search this folder" window opens up. Even when I single click on (for example) "My Documents" from the Start Menu, a "search this folder" window pops up instead of the folder opening up. I don't understand why this is happening all of a sudden. I have my folder options customized to open a folder when double clicked. Any suggestions? Thanks!

.
