I have found some errors in my events section of my computer management console. First I found that my IPSEC Services is not starting and shows an error code 1747 (The authentication service is unknown) when I bring up the service properties and try to manually start the service. I'm looking for a solution

that windows help and the hyperlink have not been able to supply me. This is the error as logged:

Event Type: Error

Event Source: Service Control Manager

Event Category: None

Event ID: 7023

Date: 11/22/2005

Time: 1:24:51 PM

User: N/A

Computer: DJ-HOME

Description:

The IPSEC Services service terminated with the following error:

The authentication service is unknown.

For more information, see Help and Support Center at

<http://go.microsoft.com/fwlink/events.asp>.

I also found other errors showing:

Event Type: Error

Event Source: Service Control Manager

Event Category: None

Event ID: 7023

Date: 11/5/2005

Time: 1:47:51 PM

User: N/A

Computer: DJ-HOME

Description:

The Application Management service terminated with the following error:

The specified module could not be found.

I have looked a little further in my computer management console and have also found (under "security") that the following event is also logged:

Event Type: Failure Audit

Management Console Errors

Event Source: Security
Event Category: Policy Change
Event ID: 615
Date: 11/22/2005
Time: 1:24:51 PM
User: NT AUTHORITY\NETWORK SERVICE
Computer: DJ-HOME
Description:
IPSec Services: IPSec Services failed to initialize RPC server with error code: The authentication service is unknown.
.. IPSec Services could not be started.

I don't know how this affects the overall problem but thought I should add it to give a better picture of the problem/s. My cable connection is obviously working and I have noticed no other problems. The authentication service is where I seem to lose the ability to follow the trail to correct the situation. Where do I go and what am I looking for to fix this?
