Ed;

You got it correct.

It will run but slowly, other than that no problems with Windows XP.

Simply install the new memory when it arrives and your friend will see a huge difference in performance.

Thanks, don't bother -- it dawned on me to look it up on the microsoft site. (Doh!). The answer is XP Home will actually run in 64mb. But not very well.

I'll be installing XP Home on a friend's computer this weekend, but the 512mb memory I ordered won't get there until I'm about to leave. She has 128mb. Will XP install and run in that? I anticipate much swapping to disk.
