For the copy command the system says that "file not found"
for dir command it says "wrong parameters"

"Doug Knox MS-MVP" wrote:

That's what its supposed to do. At the C:\Windows> prompt, type in

```
CD SYSTEM32
COPY dllcache\MSGINA.DLL
```

Then reboot. If it says file not found, type

```
CD \WINDOWS
DIR MSGINA.DLL /S /A
```

Note the location of any copy/copies it finds, and the date on the file. Copy the newest one from its folder to the Windows\System32 folder using the COPY command.

Thank you. But when I hit enter the system goes to c:windows>. Then
nothing
happen.

Re: The logon user file msgina.dll file is missing. restore it.

During safe mode the system is saying:
"The logon user interface DLL msgina.dll
file is missing. Restore it"

When I start the pc on repair mode RC using
the cd xp, the system asks for
administrator password. I do not have an
administrator password. I use my
log
in name to do the administrative work and
the system never asked for
administrator or administrative password
when I installed XP

How do I find the administrative password?

Thank you

Just hit enter and it will continue

Bobby
