Just to add, whilst you have finally installed vid drivers from Dell did you also install the mobo chipset drivers?  
If not you could have further problems down the line, since currently you will be using the default win drivers

I operate this PC from my home, but I am connected to the University of Cincinnati system (I am a professor) with all of its filters and

protective

software. In addition, I use McAfee Enterprise, zone alarm, windows

firewall,

ad-aware, spy blaster. All are kept updated and on alert. And still it happened.....These bozos are clever. I will look at your suggested web

sites

and be guided accordingly.

....Again...Many Thanks

video

## Re: Windows Display Problems

driver from Dell and fixed the problem....I learned something today –  
...to stop whining until I have exhausted ALL my personal options.....MANY THANKS.....

Now if I could have figured out how and fixed my registry last week, I wouldn't be suffering the subsequent trauma of reconstituting this

system

almost from scratch. Better yet....I'd have given a lot to just catch

up

to the wretch who generated the virus that caused my PC to "deep-six".

I'm glad you got it sorted. If you protect your computer properly and practice "Safe Hex", you will not get infected. There will always be wretches generating viruses but if you practice "Safe Hex" you will not

get

them. I have quite a few heavily-used Windows machines and because they have good av, firewalls, operating systems and major applications are regularly patched, and educated users – the machines stay clean.

Safe Hex:
