All my drives are NTFS. The link to the "shared resources" section does not work. That is the section I need. Oh, well... If you can provide any details, that would be great. Thanks, -Tom

Hi,

I have 3 PCs (call them A, B & C) at my home all connected with wifi.

They all use XP Home SP2. They can all see each other.

How do I set

things up so B can access a folder on A, but C is denied access to that same folder?

Is there some freeware that can do this? Does it require XP Pro?

I tried booting up A in Safe Mode to change the permissions.

But B & C

could still access the folder over the network.

I do not want to encrypt or compress the folder on A. I just want to password protect it.

Thanks,

Tom

Re: XP Home folder protection

You will probably find the answer at this site :-

Home Networking

<http://www.microsoft.com/windowsxp/home/using/howto/homenet/default.asp>

Sorry, I don't have a home network but you may get some more info from these links :

Steve Winograd's Networking FAQ
