I have noticed that when I make a shortcut for IE (7) and drag it to desktop, it does not work. They used to work. What could be the problem (XP Pro).

Run URL Fix from:

http://www.dougknox.com/xp/file_assoc.htm

THANKS, that did fix that problem. However, now I notice that an shortcut icon on the desktop for defragmentation also doesn't work. That must be a different fix. I went to the page you recommended but can't find an appropriate fix. Do you know of one??

I think a registry cleaner is to fault for these problems.
