This patch does not work either. I got the same error message when trying to apply the patch on top of SP3. Any other suggestion?

Update for Windows XP (KB951072)

Brief Description

Install this update to resolve an issue that is caused by revised daylight saving time laws in many countries.

System Requirements

a.. Supported Operating Systems: Windows XP Service Pack 2; Windows XP Service Pack 3

<http://www.microsoft.com/downloads/details.aspx?FamilyId=81D03DA3-846C-4F7F-8791-CD9943CE089>

You will need to validate that you have a Genuine copy of Windows.

You can also look on the Windows Update page, and see if this update somehow got hidden and was not installed previously. I believe you need XP SP2 or XP SP3 for these updates. If you are still running XP SP1 or earlier these may not work, until you update to at least XP SP2.

I already tried KB931836 and it's giving me that error I've written above.

As

for the Australian, I need the USA version.
