There are some problems. I'm not sure that they might happen following to updating to SP2 of my PC.

1. McAfee : the anti-virus program working slow while opening the OS (windows operating system). Seem that it is not in response. Then have to wait for over 3 mins to work as normal.
2. MY COMPUTER : when I browsed MY COMPUTER, it won't explore or browse PC drives (C:\ , A:\ , D:\)
3. Recently, With IE Explorer 6.0 : I couldn't open some websites such as this websit (www.microsoft.com) which I couldn't open directly except opening via other website. I pressed "ENTER" button but It wouldn't browse the website.
4. Recently again, I had a problem with saving files by using any application. For example, IE (Internet Explorer) when I opened e-mails and I wanted to download and save attached files on to PC. It couldn't be done. Moreover, It stuck and couldn't work that IE window no more. I have to shut and "END PROCESS" --> IEEXPLORER.exe by pressing ctrl+alt+del. It happened everytime I want to do something like that. Another Application that couldn't work in the same way is MSOffice (Everyone of MSOffice). That is the sadest thing I've ever met.
5. Moreover, My printer (Canon MPC190 Printer) : It couldn't be printed out no more. I'm not sure why this problem had to be happened. At first I thought It might be caused from a mal-function of printer's driver but when I re-installed the driver again, still couldn't order to print my work. It said something about MPService (Unable to communicate with the device. Please start "MPService" from the Services applet in the Control Panel. Then please right-click on the StatusMonitor to reconnect and try again)which I checked it already. I opened Control Panel and I chose "Administrative Tools" and I double-clicked on Services Icon. It appeared with that there are many services working and dealing with the system. I right-clicked at MPService in that "Services indow. I selected "Restart". It restarted the MPService. It seemed everything is going to be fine. Not yet, I had reconnect the device again as it was said in the message box (said earlier). But it couldn't work again. I don't know why then I uninstalled and installed the driver over like 4-5 time but still couldn't work. I don't think it has a p
