"Steve Day" <SteveDay@xxxxxxxxxxxxxxxxxxxxxxxxxxxxx> wrote in message news:9D35539D-D439-4607-A961-6791A77ABD6D@xxxxxxxxxxxxxxxxxxxxx over the weekend the folder task of local disk c: (the root folder) changed to "video" from "system" this causes incredible slowdown when accessing any sub folder containing many files.

how do u reset the folder task of the main root folder back to "system"?

given that:

- a. the folder is classed as a windows created folder so there is no "customise" option for it.
- b. resetting folders to default changes all other system folders back to their default tasks but NOT the root folder.

help would be appreciated.

Steve
