That's not what I meant.

Let's take the exemple of MS Word. When you click on File, you get a number of sub directory (like New document, Open, Save As....), some are hidden. If you wait a few second, the hidden ones appears.

That's what I want under Start====>All Programs.

>-----Original Message-----

>Right-click on the folder you wish to hide, select properties. In the box that appears, put a tick in the box next to hide.

>Click on apply - This will hid the folder from view.

>

>If you later wish to access it, right-click on 'All Programs', select explore and then via tools/options, untick the hide folders option and you'll be able to access or modify the hidden folders properties.
