David, thanks for all your help. I've run every conceivable tool to remove viruses/trojans/spyware etc. and I also have full time McAfee Virusscan/Firewall Plus/Privacy Service installed. The tool I mentioned fixes things, but only until the next boot and then I start all over again. When it's run you have to reboot to take effect. If you don't you won't be able to access the internet at all. The link is:

<http://www.spychecker.com/program/winsockxpfix.html>

I guess there is a corrupted and/or missing component somewhere on my disc which needs replacing or altering.

--

Peter in Toronto, Canada.

Windows XP Home SP1

Pentium 4 @ 3.00ghz, 160gb HD, 1.00gb DDR.

Rogers Hi-Speed Extreme Internet on Cable.

I'm having (or will after coffee and reading the paper) a look at that

WinSock thing. You did post that it temporarily fixes the problem?
