I've modified the policy's to remove the shutdown button from the start menu. I'd like to add a restart button in its place (The machines in question should be left on so I want users to be able to restart the workstation but not shut them down).

Does anyone know how to add buttons / shortcuts right at the bottom of the start menu where the Log Off , ShutDown buttons normally are. I can add them to the menus elsewhere / desktop etc but I would really like a restart option where the shutdown button used to be.

Any ideas? Anyone even seen it done, know if its possible?

Any ideas / links appreciated.

Stuart
