Just to let everyone know, David Candy's tip below (IF NOT) helped me immensely.

I edited my registry, rebooted and everything back to normal. Don't know what happened to cause the problem but is fixed now. Possibly a program called Tuneup changed my original registry?

IF SO

Type regedit in Start Run

Navigate to

HKEY_CLASSES_ROOT\exefile\shell

and delete the default value (which will be runas). Do NOT delete the subkey of the same name.

IF NOT

Type regedit in Start Run

Navigate to

HKEY_CLASSES_ROOT\exefile\shell

[it get different from here]

Edit menu – New – Key

name it open

select the key open

Edit menu – New – Key

name it command

select the key command then double click (default) in the other pane

enter exactly

"%1" %*

if you get confused runas has an identical command.
