Pardon me for jumping in.
what version of windows xp and build are you using? mine does
not have that options [Version 5.1.2600 Build
2600_xpsp_sp2_gdr.050301-1519 service pack 2].

I think I can change the location my document folder easily
enough with the right click but I just can't find in for
c:\documents and setting folders even as administrator.

Well I am also using XP 5.1.2600 sp2
and i can just go to my desktop and right click on "My
Documents"
and under properties I get the "move" option

Same here, BTDT after last rebuild and before, too. Just checked;
it's still there.
