Chris,

The links were taking forever to open for me earlier also.

I just tried both links again and they load OK now.

Try again. Who knows why.

Hi Wesley

Thanks for the quick reply. Tried both hyperlinks, but for some reason I cannot access them as they take forever to load.

Any ideas on this?

Cheers

Chris

Nothing happens when you right click?

Right-click is slow or weird behavior caused by context menu handlers  
<http://windowsxp.mvps.org/slowrightclick.htm>

Right-click is extremely slow only when Network is enabled

Hi

Please could somebody help me. I once had access to this.  
I currently cannot right click on a folder on my desktop or  
within  
mydocuments to gain access to the area within properties that  
allows me  
to change the picture of the folder. I have searched the  
internet and  
have tried many different things in order to restore it.

Could anybody be of assistance or if anybody has had this  
problem please  
help.

Have also tried to create a checkpoint within XP but this is  
not working  
as it takes too long to achieve and while I have been waiting  
it comes  
back saying not repoding when I do Ctrl ALt Del and look  
at the task  
manager.

All ideas welcome for each part.
