Hi,

Where can I find how the user groups are defined? is there a Component for that?

I Tried to set a user as Power User (2) and didn't work. I though I need to define groups or so.

May be you someone can help me with this. Is there a possibility to use a different Administrator Account Name that "Administrator"? Something like "Admin", It looks I can not change the Administrator account name in the Admin Component. What I'm trying to avoid is having an Administrator Account using the "Administrator" as name.

Reto,

There is a User Account component to add users and assign them to groups

```
Â· cmiUserName = "FieldService"
Â· cmiUserPassword = "password"
Â· cmiUserGroup = "1"
```

NOTE: User groups are DEFINED as:

```
Â· cmiUserGroup 1 = Admin group
Â· cmiUserGroup 2 = Power User group
Â· cmiUserGroup 3 = User group
Â· cmiUserGroup 4 = Guest group
```

Hope this helps
