You can create another account with admin. privileges. In TD, add another "User Account" component. This will show up as "User Account #2". Then set the following attributes in the Advanced Settings tab: cmiUserName, cmiUserPassword, and set cmiUserGroup = 1.

Something like "Admin", It looks I can not change the Administrator account name in the Admin Component. What I'm trying to avoid is having an Administrator Account using the "Administrator" as name.
