Hi Roberto,

One an only restriction is:

File must exist and be allocated up to the max size that you will use on physical medium.

So when you commit it only file data block will be written to disk.

If file grow you will have problems since FS tables are not flushed so you will have data loss. (data will be on disk but file size

will revert to original after the reboot so you won't be able to access your data).

Regards,
Slobodan
