Hi KM,

Yes, the 'Windows Firewall/Internet Connection Sharing' component is included in my image, and the Firewall is turned on.

The start value of the SharedAccess service already was 2.

Further, I'm not quite sure what to look at/for in the in setupapi.log.

I've looked at your other posts regarding filemon and regmon. I started both before running 'net start sharedaccess' only to get the same error - 'The executable program that this service is configured to run in does not implement the service.'

Thank you again! Please please reply with ANY other ideas!
