Hello,

I'm developing a new XPE image for a Axiomtek SBC84600 platform on a Compact Flash card.

I prepare my CF (fdisk, format, bootprep) and copy my image files on it.

When I try to boot on my compact flash, sometimes (ones to 2) I see error message:

"Windows couldn't start because the following file is missing or corrupt:

WINXPE\SYSTEM32\CONFIG\SYSTEM

You can attempt to repair this file by starting Windows Setup using the original setup CD-Rom.

Select 'r' at the first screen to start repair"

Sometimes, I have blue screen to, each blue screen with a different error code...

Sometimes it works....

I've tried to do again my image... Same error...

I total format my CF (with PCCheck)... same error...

What can I do???

Please....

Best regards.

Jérôme.

.
