Thanks for the info KM!

Ok I've had a look at the FBALog file and I'm not sure what i'm looking for.

I can see a bunch of invalid path logs like this:

11:46:41 AM – [FBAProcessRegisterDLLs] 242483226 -> Invalid Path:
[C:\WINDOWS\FBA\FBANET.DLL]

It keeps looking to my C: drive for it's data, when my XP embedded image is loaded onto my D: drive.

Do i need to set the drive i have XPE installed on to be the active partition??

If so how do i do this without deactivating my XPpro partition??

I've attached a copy of my fbalog.txt file for anyone to have a look at. I'd really appreciate it.

Thanks
M.
