Direct support for EWF RAM (Reg) mode has also been added to the base EWF component in Feature Pack 2007, the CTP of which is available on the Microsoft Connect site. For details on how to download the current CTP (which includes a lot of other new features and component fixes), please visit this article on our team blog:  
<http://blogs.msdn.com/embedded/archive/2006/07/31/684728.aspx> .

Hello,

Slobodan's excellent solution was available before the REG mode of EWF was available, it may be wise to switch to the MS method. (Although it's basically the same thing, the EWF component won't conflict with the API component)

I use the component EWF RAM Registry SP2 from <http://www.slobodanbrcin.com/xpe/ewf/regramewf.html>. But with this component in my configuration I can not add the component Enhanced Write Filter API (EWF API). If I do this the target designer always adds the component Enhanced Write Filter which conflicts with the RAM REG components.

Is there any possibility to use the REG RAM Mode and the EWF API?
