Well, not so fast.

Although I managed to install the SP1 database with no errors, the tools report that they cannot log on to the database because either the database is open in exclusive mode or they're not authorised.

Are there some additional settings I need to adjust in SQL Express? What sort of logon do I need? "Network service" is the default; do I need another?

I should note that I'm hosting this on Vista RC1.

Thanks for your help.

Regards,
Dean

Andy,

I uninstalled and reinstalled, and it seems to work OK.

Thanks for your help.

I know that when you install a second instance of SQL on the machine it will have a new instance name.

However, i don't know if you can install a second instance of SQL 2005 Express if it detects another but you could try installing a second instance. Otherwise i think you might have to uninstall and then

Re: XPe Toolset with SQL Express

re-install.

Sorry, i hope the first method works for you.

Andy

Andy,

Well, I already installed SQL 2005 Express. Is it possible to change

the

instance name after installation? I didn't see any obvious way to do

it.

Thanks for your help.
