IF you mean you tried to install the driver and it failed, you may want to look at the runtime's log (\windows\setupapi.log) to see where it is failing and why. Then you'd know if you are missing a class installer, coinstaller or simply a driver dependency.

What component/s is/are missing in building an image (in target designer),  
that will let me install Xtreme Graphics of Intel?

Thank you,  
Keren
