KSMH,

There was QFE for EWF SP2 – Q871225 – that brought in the Registry Filter.

IIRC, It was only available from OEM Secure Website that was deprecated. You may want to try to find the patch on new ECE site

(<http://blogs.msdn.com/embedded/archive/2007/01/30/location-of-xpe-updates-is-changing-at-the-end-of-january>)

=====

Regards,

KM

Thanks Sean,

I am using the XPe SP2 image. So is there any other way to get that.

Thanks and Regards,

KSMH

Do you have the Registry Filter component in the image? Registry Filter preserves the Domain secret key when EWF is enabled:

hi,
My XPe machine participate in a domian . It has the
EWF,enabled.
After thirty days ,It just display the following error message
" The system cannot log on now because the domain
MYDOMAIN is not
available"
. here MYDOMAIN is my test domain.

how can i avoid this error. I want to avoid this type of
domain entry
proplem.Can anyone help me.

Thanks & Regards,
KSMH
