Someone else initially installed our XPe Studio CD's. I'm not sure if they installed the language packs. I cannot get another language working properly in my build, so I'd like to reinstall the language packs from the CDs to ensure all needed files are there.

I'm currently at FP2007 with Rollup 1.0 installed. All monthly updates have been installed periodically.

If I start with the SP1 language pack CDs, then SP2 language pack CDs, will any of my updates be overwritten? Is this how I should handle it?

If there's a way to tell the language packs were installed originally, perhaps I don't need to install old stuff?

Regards,
John
