Thanks for that Anthony.
I'll give that a try.

The box has the CF as Slave, but I'll do a double check.
– When I replaced the 2 gig drive and the CF, the system boots OK

With 4 Gig drive and CF system goes into BIOS OK and recognizes both but
Bluescreens on booting.
The Bluescreen when USB memory stick is inserted, even when not the target
of booting is also a concern.

Cheers

Re: Bluescreen 7B

david,

try my PMQ file and creat again, and the default CF card is Slave .. have you switch to Mater ?
