Ditto, mine stopped working also on all 4 computers on my network. This is not related to the latest critical update IMHO as mine quit working first, THEN I went to check updates to be sure that wasn't needed. No difference.

It appears also to have nothing to do with either McAfee's or Nortons stuff as some have suggested as I have ruled these out.

I believe something has happened on the game server.

Does anyone know ANYONE who CAN still play these games? I have asked several friends to check on their computers and all report the same... Sits there looking for player...
