hi a friend of mine was unfortunate enough to have the mydoom and blaster virus after removing the mydoom virus i attempted to get rid of the blaster but his pc shut down and wouldnt load up properly the screen just went blank and no start up page so we used the recovery disk which seemed to work but when we went to use the pc on XP on the start menu there are no programmes just email and internet but nothing else and i have tried downloading patches from microsoft but when i do this i get a message saying that we need to download previous updates first before activating the patch except we cant because of the virus. I could really do with someones help is it possible we have done something wrong. this is a major problem
