When trying to install a downloaded, updated version (for XP) of "WinTV - Haupauge" software (File: usb98-xp\_262) from the HD, I receive the message: "You do not have access to make the required system configuration modifications. Please rerun the installation from an administrators account." I don't understand this, because I am the administrator, running the installation from an administrators account. Please help.  
Thanks, Bernie.
