Greetings --

Other than this being a glaringly obvious scam, it's a warning that your PC is very unsecured. And these messages are most definitely not "from Microsoft Windows."

Does the title bar of these pop-ups read "Messenger Service?"

This type of spam has become quite common over the year or so, and unintentionally serves as a valid security "alert." It demonstrates that you haven't been taking sufficient precautions while connected to the Internet. Your data probably hasn't been compromised by these specific advertisements, but if you're open to this exploit, you may well be open to other threats, such as the Blaster Worm that recently swept across the Internet. Install and use a decent, properly configured firewall. (Merely disabling the messenger service, as some people recommend, only hides the symptom, and does little or nothing to truly secure your machine.) And ignoring or just "putting up with" the security gap represented by these messages is particularly foolish.

Messenger Service of Windows

HOW TO Enable or Disable Internet Connection Firewall in Windows XP

<http://support.microsoft.com/default.aspx?scid=kb;en-us:Q283673>

If you decide on a 3rd party firewall product, whichever firewall you decide upon, be sure to ensure UDP ports 135, 137, and 138 and TCP ports 135, 139, and 445 are all blocked. You may also disable

Oh, and be especially wary of people who advise you to do nothing more than disable the messenger service. Disabling the messenger service, by itself, is a "head in the sand" approach to computer security. The real problem is not the messenger service pop-ups; they're actually providing a useful, if annoying, service by acting as a security alert. The true problem is the unsecured computer, and you've been advised to merely turn off the warnings. How is this helpful?
