Outlook and Front Page are components of Microsoft Office – run its Setup to remove them.

Outlook *Express* and WMP are integrated to the system. OE is not worth bothering about – just don't use it if you do not want to. WMP is best avoided by getting some alternative to take on the associations for all file types concerned. If you empty out the Skins, Visualisations and Installer folders under Program Files\Windows Media Player there is not that much left, but I was told in relation to an earlier version that removing dll files might impact other facilities that are not obviously related
