Hi,

Im running Windows XP with the latest updates and patches. Recently I ran a program called Spybot to get rid of all the spyware popping up on my PC. After this happened everytime I start up my PC the windows explorer pops up and displays my system32 folder...twice. I have uninstalled the spybot and ran a virus checker to no avail it keeps happening.

Does anyone have a remedy to stop this opening up..apart from this everything is working fine.

Thanks
