I recently found an executable on my system named JunkGreat.exe. I have searched extensively on about every search engine you can name by now, and not one of them has ANY reference to a "JunkGreat.exe". Not one reference?? That's a first for me.

Anyway, anyone have any idea what it is...or was (I deleted when I discovered it.)

Also, I have current virus software, spyware (several apps) and a good firewall. I don't typically find random crap like this on my sys.

Regards,
