Hi!

I don't remember the exact words in the error message, but it said something like "the environment or OS or something doesn't match the needs of the application (Office)" like it doesn't belong here....something like that. I'm sure as hell I won't try it again.

I have better things to do than to reformat the HD and reinstall Windows again.

Alon

P.S. "Supposed to" and real life, unfortunately, is not always the same :-)
