Hi, I have a corrupt version of WindowsXp Home that I am trying to repair and would appreciate HELP. I was asked if I want to Upgrade and clicked OK and the Upgrade install began but with about 13 minutes left in the install, I received an error message titled UNREGMPZ.EXE-Entry Point Not Found with The Procedure entry point GETIUMS could not be located in the link library MSDART.DLL. From what little I know, this does NOT look like a good sign and would appreciate your help. Agin, my objective is to Repair WindowsXp Home. Thank you,  
Bob
