To Sarge,

Just noticed your problem with disk creep. You can run disk cleanup weekly and delete all but the last system restore point. Open My Computer, right click on the hard drive and then the disk cleanup button just to the lower right of the pie chart. Then besides deleting temp files, click the more tab and select the restore point option to remove all the extra restore points.

Also, you can open the system restore tab on system properties (right click the My Computer icon and select properties) and reduce the size of the amount of space allocated to system restore. You can also reduce the size of cache files and again as I say, run disk cleanup regularly.

Hope this helps.
