The MS Fax in XP SP2 has died.

No messages, just fails.

When you right click in the Fax Console > Outbox, click on the message and then Properties, it says 'Retries Exceeded - Fatal Error'.

I have checked every configuration setting I possibly can, modem all functions, now I am stumped.

I have search the MSKB and can find nothing, un-installed and re-installed, exact same issue.

Real bummer as I have no other way of sending faxes.

Please if you can assist it would be sincerely appreciated.
