>I use "time.windows.com" by default. To be sure, I opened the "Date and Time Properties" and realized that there has been a time synch operation this morning with the following information on the "Internet Clock" separation (with my translation): "Time has been updated successfully from time.windows.com Date: 06.09.2004 Time: 07:14 Next Update: 13.09.2004 07:14"

This looks like one of those cases where two different settings in Windows have got out of step with each other. This often comes right if you reset to something different from either and then back again. So I would go to Regional and language and choose some place entirely different, eg Germany, and Apply. Also take the Custom for that and change the date order again – eg to the Japanese yyyy/mm/dd. OK, logout, log back in and reset things to what you want
