I found this info on this Web Site:

<http://aumha.org/win5/kbestop.htm>

0x000000ED: UNMOUNTABLE_BOOT_VOLUME
(Click to consult the online Win XP Resource Kit article.)
The kernel mode I/O subsystem attempted to mount the boot volume and it failed. This error also might occur during an upgrade to Win XP on systems that use higher throughput ATA disks or controllers with incorrect cabling. In some cases, your system might appear to work normally after you restart.

0x000000ED: UNMOUNTABLE_BOOT_VOLUME {KB 297185} Win XP
(During reboot while upgrading to Win XP)

0x000000ED Error Message When Volume on IDE Drive with Caching Enabled Is Mounted {KB 315403} Win XP (NTFS volumes on some IDE drives)

0x000000EF: CRITICAL_PROCESS_DIED

0x000000F1: SCSI_VERIFIER_DETECTED_VIOLATION

>From what I understand you are using a wrong IDE cable for the type of HD you have installed.

I Hope this helps

>-----Original Message-----

>Help! The computer turns on but Windows won't come up---

>instead it goes to a error code page

>with 'UNMOUNTABLE_BOOT_VOLUME' and gives me a STOP error

>code. It says some things about new hardware or software

>and disabling---but we haven't have any new software or

>hardware in months and the latest thing that we've

updated

>was NORTON about a week prior. I can't get anything to

>come up as all the alternate boot programs (PF8, etc.) go

>back to the same error screen. Anyone give a clue?

>.
