I know that this isn't exactly Windows XP related, but I was curious if it was time for a better computer because a few games have been a little on the slow side. The visualizations in WMP9 are somewhat slow when I'm using full screen. Any opinions would be appreciated. I believe my computer does meet the requirements for the new "Longhorn", but I think it just barely meets the requirements. Anyway, here are my system specs. Anything that you think should be upgraded or is bad if not the whole thing, let me know. Any recommendations would be welcome...

- Power supply unit: 400W 8 connectors
- 3 case fans (all three light up) One in back. One in side. One on top.
- Aspire X-Dreamer II case (pretty new)
- Memorex 52x32x52 CD RW drive
- Lite On 16x DVD drive (48x CD ROM)
- IDE Western Digital 80GB 7200RPM 2MB cache hard drive
- IDE Western Digital 120GB 7200RPM 8MB cache hard drive
- 3 1/2" floppy drive
- Asus A7V333 motherboard version 1.xx BIOS 1017 (oldest component in my computer)
- AMD Athlon XP 2400+ overclocked to 2.26GHz (274MHz FSB)
- Kingston PC-3000 512MB DDR RAM
- NVIDIA GeForce3 Ti200 128MB DDR with TV out (manufactured by Chaintech)
- Creative Soundblaster Live! 5.1 speakers
- Linksys 10/100 network card for Cable Internet
- Logitech Z-560 speakers 4.1 400W maximum power
- Logitech optical mouse (corded) blue
- Logitech multimedia keyboard (black)
- Proview 19" CRT monitor
- \$10 microphone
- Vioneer 5800 USB scanner
- Canon i560 printer (Brand new)
- Logitech Wingman controller

Thanks in advance.
