Greetings --

What's MSN got to do with your browsing habits, other than making them possible?

When visiting porn sites, always be careful not to download/install their "free" viewers. You'll get more than expected, every time. To repair the current situation, uninstall the "viewer(s)" provided and then use Ad-Aware from www.lavasoft.de and SpyBot Search and Destroy from www.safer-networking.org/ to clean up any residue. Both have free versions for personal use.

You should also try using MSConfig to see if something is being started each time you reboot.

Additionally, Look in the C:\Documents and Settings\All Users\Start Menu\Programs\Start Up and C:\Documents and Settings\username\Start Menu\Programs\Start Up folders, and in the system registry, primarily in the HKLM\SOFTWARE\Microsoft\Windows\CurrentVersion\Run and HKCU\SOFTWARE\Microsoft\Windows\CurrentVersion\Run keys.

How to Troubleshoot By Using the Msconfig Utility in Windows XP
